

# The VMARS Archive

VMARS is a not-for-profit organisation specialising in all types of vintage communications electronics. We maintain an archive of documentation to help our members understand, research, repair and enjoy their vintage radio equipment. Access by non-members is extended as a gesture of goodwill, but not as a right.

Rare documents are frequently provided free of charge by VMARS members, and all scanning and document processing is carried out on a voluntary basis. Accordingly, we do not expect others to profit from the hard work of volunteers, who give their time freely without charge.

This is a gentle reminder that the document attached to this notice is provided to you **for your personal use only**. This edition remains copyright of VMARS, and while you may sell or give your copy to someone else, this right does not extend to making further copies of this information, either to give or sell to others. This includes a prohibition on placing it on websites, or printing it for sale at rallies, boot fairs or similar public events. **If our goodwill is abused, then withdrawal of public access to our archive will be the result.**

Please refer anyone else wanting a copy back to VMARS – either to our website at <http://www.vmars.org.uk/> or by email to the Archivist at [archivist@vmarsmanuals.co.uk](mailto:archivist@vmarsmanuals.co.uk). If you want to know more about our copyright, please see the FAQ below.

## FAQ on copyright of VMARS documents

**Q** How can you copyright a document that is already in the public domain?

**A.** *Plainly the original copyright of the content has expired, or we have obtained permission to copy them. What we copyright is our own edition of the document.*

**Q.** Surely your “own edition” is identical to the original document, so cannot be copyrighted?

**A.** *Our editions are **not** identical to the original document. You will find that full advantage has been taken of electronic publishing facilities, so pages are cleaned up where possible (rendering them better than originals in some cases!), and large diagrams are prepared for both on-screen viewing and for easy printing at A4 format.*

**Q.** Why do you not just give your manuals away, as so many do via the internet these days?

**A.** *We do make all our manuals available free of charge (in soft copy) to VMARS members. These members have already covered the costs of running the archive via their subscriptions. The only time members are charged for copies is when they request them on paper, in which case charges are restricted to the cost of paper, ink and postage.*

*The VMARS archive is not a “shoe-string” operation. Money is spent on computing facilities to make copies available, and on shipping original documents securely (usually costing several pounds per shipment) to carry out the scanning. As members have already contributed to these costs, it is only reasonable that non-members should do likewise – and thus a very moderate charge is levied for copies provided to non-members. With typical commercial photocopying charges starting at 5 pence per A4 side, it will be evident that paying 4 pence for our equivalent on paper is excellent value (amounts current at Spring 2004). We also think “you get what you pay for” – we invite you to make the comparison and draw your own conclusions!*

*Despite the above, we will be making copies of essential technical information (circuit diagram, parts list, layout) freely available to all via our website from late 2004 onwards. This will be done to try and encourage and enable the maintenance of our remaining stock of vintage electronic equipment.*

## **Guidance on using this electronic document**

### **Acrobat Reader version**

You need to view this document with Acrobat Reader **version 5.0** or later. It is possible that the document might open with an earlier version of the Acrobat Reader (thus allowing you to get this far!), but is also likely that some pages will not be shown correctly. You can upgrade your Acrobat Reader by direct download from the internet at <http://www.adobe.com/products/acrobat/readerman.html> or going to <http://www.adobe.com/> and navigating from there.

### **Don't miss the index!**

This document has had "bookmarks" added – which provide you with an "on-screen index". These allow you to quickly move to particular parts of the document, a numbered section or maybe the circuit diagrams for instance, merely by clicking on the page title. Click on the "Bookmarks" tab on the left hand side of the Acrobat Viewer window to access this feature – move the cursor over these titles and notice it change shape as you do so. Click on any of these titles to move to that page.

### **Large diagrams**

The large diagrams are given in two formats – in A4 size sheets to allow easy printing, and complete as originally published to allow easy on-screen viewing. These versions are in different sections of the document, which can be found within the bookmarks.

### **Printing the document on an A4 format printer**

The document has been optimised for printing on A4 size paper (this is the common size available in UK and Europe, which measures 29.7cm by 21.0cm). Please follow these steps (these are based on Acrobat Reader version 6.0 – other versions may differ in detail):

1. Work out the page numbers you want to print. If you want to print the whole document, then within "Bookmarks" (see above), first click on "**Front**", and note the page number given at the bottom of the Acrobat window – this will give you the page number of the first page to be printed. Similarly click on "**End of A4 printable copy**", to determine the last page to be printed.
2. Select "File – Print" or click on the printer icon. This will bring up the print dialog box.
3. Select the correct printer if necessary.
4. In the area marked "Print Range" click on the radio button marked "Pages from..", then enter the first and last page numbers worked out in step 1 into the "from" and "to" boxes.
5. In the "Page Handling" area, next to "Page Scaling", select "Fit to paper". Then press "OK"

Note that the document is set up for double-sided printing – if you print it out single-sided then you will find a number of blank pages present, which may be removed and reused.

### **Printing the document on an US Letter format printer**

Since A4 and US Letter sizes are similar, it is expected that this document should print satisfactorily on the latter format paper. This has not been tested however, and is not guaranteed. Follow the steps as for A4 printing, and make doubly sure that "Fit to paper" is selected (step 5).

### **Any other problems?**

Please get in touch with me at [archivist@vmarsmanuals.co.uk](mailto:archivist@vmarsmanuals.co.uk).

TECHNICAL HANDBOOK - FAULT FINDING AND REPAIR DATA

This Part 2 contains fault finding and repair data in tabular and diagrammatic form. Part 1 of this EMER contains a general description of this equipment. Tels H 143 and H 144 deal with repairs.

Note: This Part 2, Issue 2, together with Part 1, Issue 2, supersedes Issue 1, Pages 1-8 and 1001-1023, dated 9 Dec 55.

ELECTRICAL AND MECHANICAL  
ENGINEERING REGULATIONS

Table 2004 - Workshop out-test figures

Test	Results	
Maximum consumption	REC ONLY: 5A at 12V, 3.2A at 24V REC, TRANSMIT & I/C: 7.2A at 12V, 6A at 24V As above but on 'Send' 17.2A at 12V, 10.5A at 24V	
HT1 limits	12V, 205 - 235V;	24V, 210 - 245V
HT2 limits	12V, 370 - 410V;	24V, 370 - 395V
Bias supply limits	1.5 - 2.0V	
Receiver heater limits	12V, 11.6 - 12V;	24V, 12 - 14V
Sender heater limits	12V, 11.5 - 12V;	24V, 12 - 14V
R.F. sensitivity	Not less than 50mW output for 2.5µV input modulated 30% at 400c/s	
I.F. bandwidth	5-8kc/s at 3dB points. Not more than 30kc/s at 30dB points	
H.F. band, calibration error	Frequency	Limits of error
	4Mc/s	±20kc/s
	5Mc/s	±25kc/s
	6Mc/s	±30kc/s
	7Mc/s	±35kc/s
	8Mc/s	±40kc/s
	9Mc/s	±90kc/s
	10Mc/s	±100kc/s
L.F. band, calibration error	Frequency	Limits of error
	1.6Mc/s	±8kc/s
	2.0Mc/s	±10kc/s
	2.5Mc/s	±12.5kc/s
	3.0Mc/s	±15.0kc/s
	3.5Mc/s	±17.5kc/s
	4.0Mc/s	±20.0kc/s
Image rejection ratio	Frequency	Image rejection
L.F. band	( 2Mc/s	66dB
	( 3Mc/s	60dB
	( 4Mc/s	55dB
H.F. band	( 4Mc/s	55dB
	( 6Mc/s	45dB
	( 8Mc/s	35dB
	( 10Mc/s	25dB

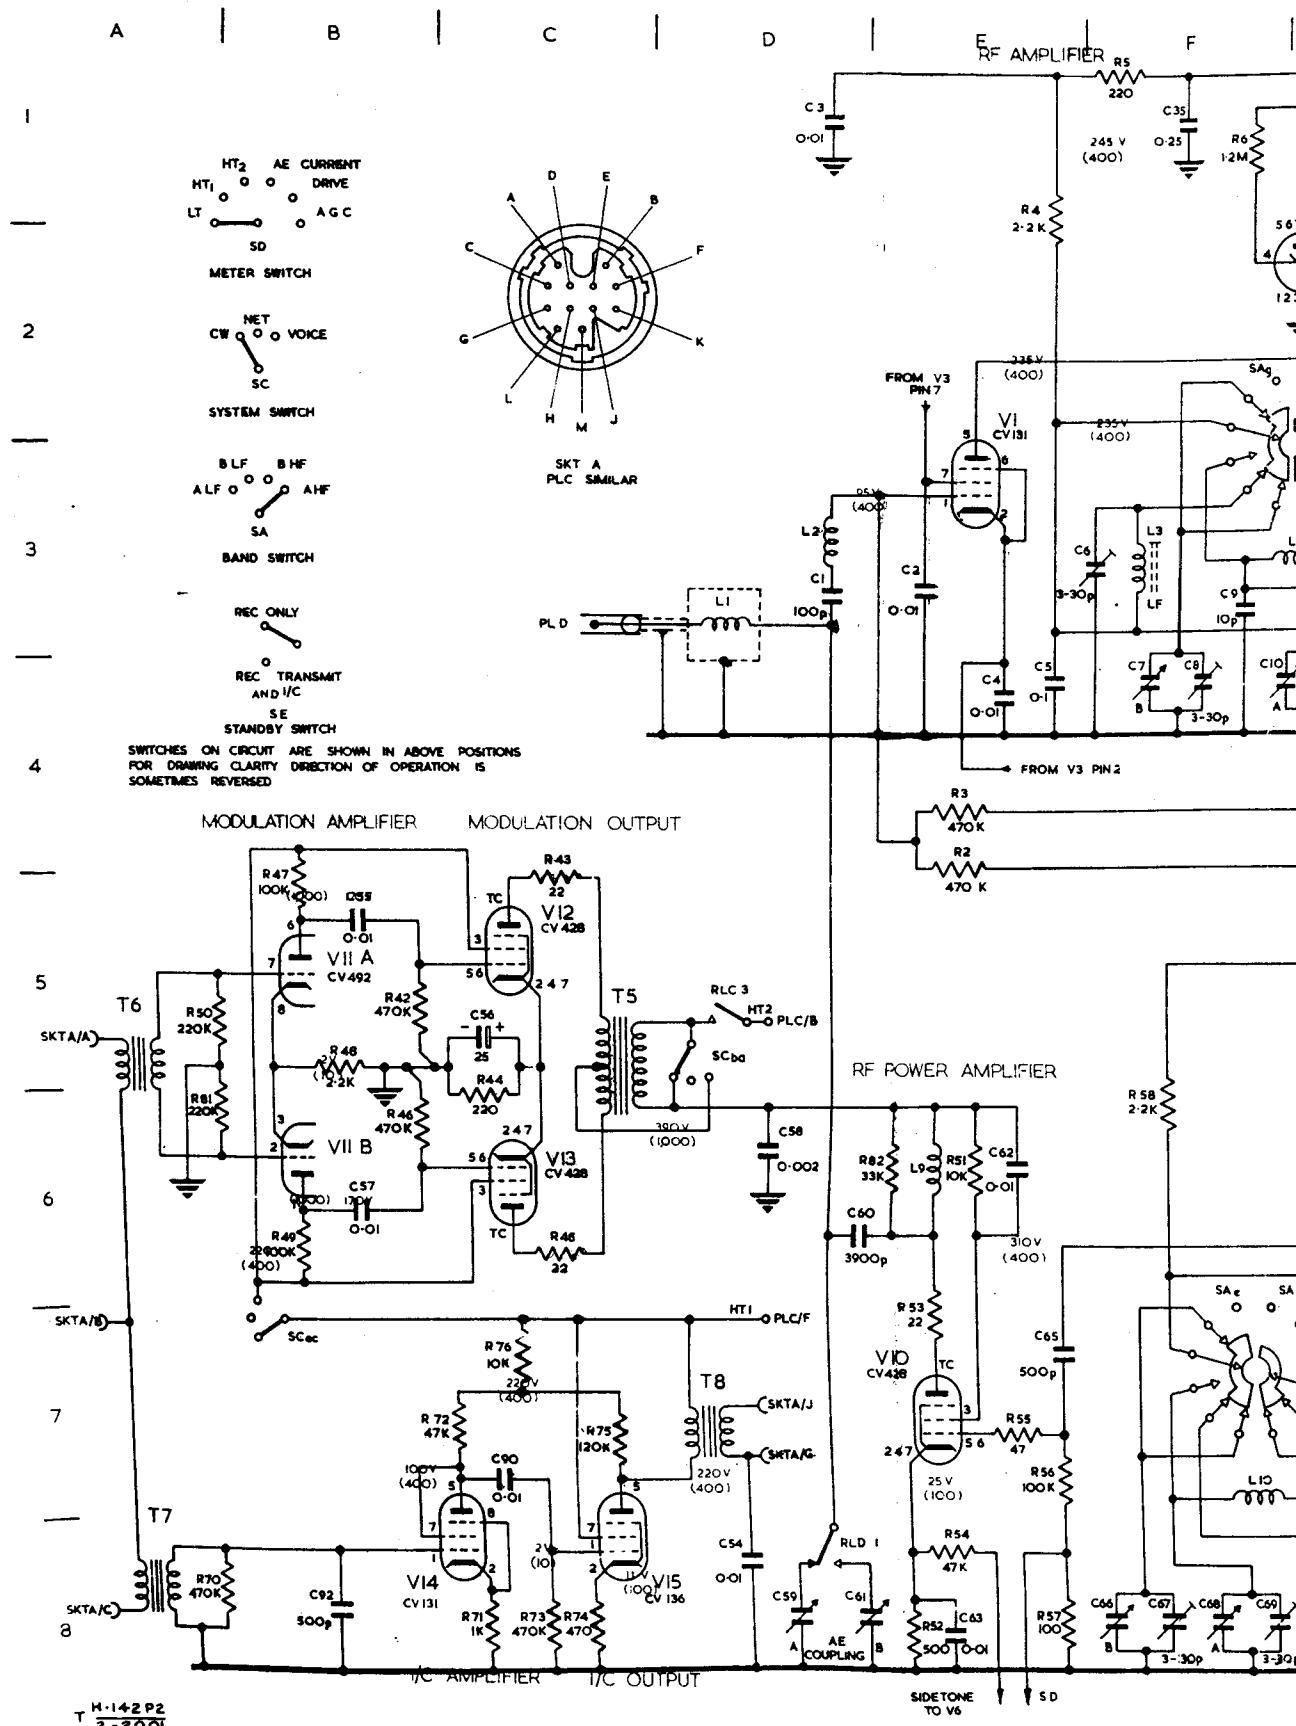

Table 2004 - (cont)

Test	Results	
I.F. rejection ratio	Frequency	I.F. rejection
	L.F. band { 2Mc/s 3Mc/s 4Mc/s	50dB 70dB 80dB
	H.F. band { 4Mc/s 6Mc/s 8Mc/s 10Mc/s	80dB 80dB 80dB 80dB
C.W. performance	With set adjusted to give 200mW a.f. for an r.f. input at 3Mc/s modulated 30% at 400c/s the a.f. output at a frequency not exceeding 1kc/s must be at least 66mW when the modulation is removed from the input and the set is switched to CW.	
A.G.C. characteristic	An increase of r.f. input from 500µV to 50mV must not cause a change in receiver a.f. output of more than 15 times (+12dB). A reduction of input from 500µV to 5µV must not cause a change in a.f. output of more than 5 times (-7dB).	
Signal/noise ratio	Frequency	R.F. input for 20dB signal/noise ratio
	L.F. band { 2Mc/s 3Mc/s 4Mc/s	5µV 5µV 4µV
	H.F. band { 4Mc/s 6Mc/s 8Mc/s 10Mc/s	4µV 4µV 3.5µV 3.5µV
R.F. power output	Not less than 4.1W at 4Mc/s (H.F. and l.f. band) Not less than 2.7W at 2Mc/s and 3.0W at 10Mc/s.	
Netting error	Not more than 1kc/s at 10Mc/s.	
Modulator sensitivity	100% modulation must be obtained with not more than 15mW input at 1kc/s.
